Warren Dalawampu

DevOps & Infrastructure Engineer | Linux, Docker, Kubernetes, Terraform, CI/CD | Backend Engineering | PHP, Laravel, Node.js
Naujan, Mimaropa, Philippines

Summary

I'm a Software Engineer specializing in backend development, infrastructure, and systems engineering, with hands-on experience building, deploying, and maintaining software solutions across application, server, and hardware environments.My background combines backend engineering with practical infrastructure operations. I've worked with PHP, Laravel, Node.js, React, Linux, Docker, REST APIs, microservices, and deployment environments.I enjoy working across the entire development lifecycle — from translating business requirements into maintainable applications to configuring infrastructure, automating deployments, troubleshooting systems, and integrating hardware components.My technical experience includes:- Backend Engineering: PHP, Laravel, Node.js, REST APIs, microservices, application architecture, and web applications.- DevOps and Infrastructure: Linux system administration, Docker, containerized development, infrastructure deployment, automation, CI/CD workflows, networking, virtualization, and server management.- Frontend Engineering: React, JavaScript, HTML, CSS, and API integration.- Embedded Systems and Hardware Integration: ESP32, Raspberry Pi, Bluetooth Low Energy, printer and barcode scanner integrations, and kiosk systems.Throughout my career, I've worked on business applications, backend services, infrastructure environments, document management systems, and hardware-integrated solutions. I've also collaborated with international development teams and contributed across different stages of software development and deployment.I'm continuously expanding my expertise in Kubernetes, cloud infrastructure, Infrastructure as Code, automation, platform engineering, and site reliability engineering.Currently interested in DevOps Engineer, Infrastructure Engineer, Platform Engineer, Cloud Engineer, and Site Reliability Engineer opportunities, as well as Backend Engineering roles involving Laravel, PHP, and Node.js.Open to remote, hybrid, and international opportunities.

Experience

NTT Limited Philippines Branch

2 years 4 months

Senior Backend Developer

October 2026 - Present (2 months)

Philippines

Developed and maintained backend and frontend features for a gaming casino platform, including third-party game provider integrations and payment gateway integrations with UnionBank and Xendit.

Independently developed a hybrid extension of the platform for physical gaming machine terminals, designed for walk-in players to access platform games without creating accounts. Implemented MAC-address-based device identification over a local Layer 2 LAN environment to support accountless player sessions and terminal recognition.

Initially integrated the hybrid platform with the microservices version of the existing system, then adapted the integration to the monolithic platform when the project direction changed.

Researched and developed a C++ hardware management system for gaming terminal peripherals, including bill/ticket acceptors, ticket printers, buttons, button LEDs, and tower lights. Implemented configurable hardware handling over serial connections, with support for enabling, disabling, and adding devices, as well as WebSocket-based simulated drivers.

Deployed the system on Ubuntu-based terminals. When touchscreen drivers were unavailable for the target hardware, developed a custom driver using serial communication to enable touchscreen functionality.

Later adapted and packaged the application for an existing gaming OS from Malta, where offline games are managed through a local game server, enabling the company's platform games to run on physical gaming machine terminals.

Senior Software Engineer

August 2024 - October 2026 (2 years 3 months)

Eclaro

Configuration Analyst

February 2024 - August 2024 (7 months)
Quezon City, National Capital Region, Philippines

Worked on configuring a highly customizable SaaS platform for insurance claims processing, translating business requirements into system configurations tailored to specific client workflows.

Used MongoDB aggregation pipelines and spreadsheet-like functions to implement data processing logic and configurable business rules.

Collaborated with multinational teams to analyze requirements, implement configurations, document changes, and perform testing to ensure accuracy and reliability.

Used Jira for project tracking and Confluence for technical documentation and collaboration.

1 Bit Software Development Corp
PHP Backend Developer
April 2023 - February 2024 (11 months)
Philippines

Developed backend systems and RESTful APIs using PHP and Laravel, translating business requirements into maintainable application functionality. Worked on proprietary casino gaming systems, third-party game provider integrations, and streaming services built with Laravel and Node.js.

Implemented microservices, Test-Driven Development (TDD), caching, and Protobuf to support application performance, reliability, and maintainability. Worked with MySQL and MongoDB for application data management.

Utilized Laravel features including events, observers, jobs, queue workers, schedulers, commands, Eloquent ORM, and middleware. Used Laravel Telescope for API monitoring and debugging.

Collaborated with frontend developers on API integration and Telegram-based web applications. Developed and managed Telegram bots for service notifications and built microservice administration interfaces using DCAT Admin.

Configured Docker-based development environments, worked with remote development devices through VS Code, maintained private Git and GitHub repositories, and implemented CI/CD pipelines for automated deployments.

MVSoftech Inc

Junior backend developer

October 2020 - April 2023 (2 years 7 months)

Philippines

Developed and maintained business applications, backend services, internal tools, and supporting infrastructure across different projects.

Built frontend applications using ReactJS integrated with .NET C# APIs. Developed a document management system with fillable PDF forms and automated document handling, as well as Node.js and MongoDB applications for dashboards and data visualization. Created Python scripts for automated file monitoring and data imports.

Customized and enhanced a Laravel 7-based HRIS and project management system to support business workflows. Integrated Node.js services for employee data synchronization and developed a barcode-based time logging kiosk with employee ID printing.

Developed a UISP UCRM plugin for promotional SMS broadcasting through the iTexMo API and created a web interface for simplifying WordPress project redeployment.

Handled infrastructure and server administration, including Linux virtual machines, replication, Docker deployments, Nextcloud, reverse proxies, Cloudflare, local DNS, and WireGuard VPN.

Set up and maintained self-hosted GitLab and GitLab Runners, BookStack, Portainer, and MongoDB management tools. Implemented automated deployments using GitHub webhooks.

Collaborated with network engineers on port forwarding, public IP configuration, and multi-subdomain deployments. Assisted with client system audits, proposed technical improvements, and guided interns through development tasks.

Mindoro State College of Agriculture and Technology - Calapan City

MIS personnel

July 2019 - October 2020 (1 year 4 months)

Handled IT operations and technical support for the university, including computer laboratory maintenance, hardware and software troubleshooting, and campus network configuration and maintenance.

Assisted employees with technical issues and supported day-to-day IT operations.

Developed a campus enrollment system using an MVC-based PHP framework and assisted in facilitating and supporting student enrollment processes.

Education

Batangas State University

Master's degree, MSIT · (2019 - 2022)

Mindoro State University

Bachelor of Science, Information Technology · (July 2015 - May 2019)
