

Warren Dalawampu

Full-Stack & Systems Software Engineer

✉ warrdev08@gmail.com ☎ +63 956 164 5935 📍 Pasig City, Philippines 🌐 [warr-dev](https://warr-dev.com)

Professional Summary

Software engineer with 6+ years building production backend services, casino gaming platforms, and hardware driver integrations. Built a localized casino system from base OS to Electron client and wrote the C++ drivers that connected offline gaming machines to an online platform, shipping the prototype into the live product line. Works across Laravel/Node.js services, Linux infrastructure, and ReactJS clients, and has led small distributed teams.

Work Experience

NTT Limited Philippines Branch

Philippines

Software Engineer

Aug 2024 – Present

- Built backend services for an online casino gaming platform, including hardware-to-platform integration and third-party payment provider connections (Xendit, UnionBank).
- Developed a localized casino system from scratch on a LAN server, owning the full stack from base OS (Ubuntu) to C++ hardware drivers to Electron client app — enabling offline gaming machine deployment independent of the cloud platform.
- Wrote C++ drivers for casino terminal hardware (bill/ticket acceptors, printer, buttons, LEDs) using proprietary device libraries, exposing hardware control through a WebSocket server consumed by the Electron client.
- Mentored junior developers during architecture design and implementation, and maintained source control via self-hosted GitLab.

EClaro Philippines

Philippines

Configuration Analyst

Feb 2024 – Aug 2024

- Configured a SaaS insurance claims processing platform for enterprise clients, translating business requirements into system configurations and running testing cycles to keep claims processing accurate and auditable for insurer compliance.
- Leveraged MongoDB pipelines and spreadsheet-like platform functions to model client-specific claim workflows.
- Collaborated with multinational teams (US, India, Pakistan, Russia, UK); used Jira and Confluence for tracking and documentation.

1 Bit Software Development Corp.

Philippines

PHP Developer

Apr 2023 – Feb 2024

- Built and maintained RESTful APIs and streaming servers for a casino gaming platform using Laravel and Node.js, following TDD practices throughout.
- Applied caching and Protobuf to reduce payload size and response latency in game backend APIs, and integrated third-party casino game providers into the platform.
- Leveraged the full Laravel ecosystem — events, queues, scheduler, ORM, middleware — to manage game state, payment flows, and player sessions.
- Built CI/CD pipelines and automated Telegram bot deployments, containerizing the dev environment with Docker to eliminate environment drift and remove manual deploy steps.
- Created microservice admin UIs via DCAT Admin; collaborated with frontend teams on API integration including Telegram-based web apps.

MVSofttech, Inc.

Calapan

Junior Backend Developer

Oct 2020 – Apr 2023

- Built a barcode-scanner time logging system integrated with the company HRIS and deployed as a thin-client kiosk, replacing manual time entry for on-site employees.

- Developed a Document Management System with fillable PDFs and automated document handling, reducing manual form processing for customer submissions.
- Customized a Laravel 7 HRIS and project management system to match current business processes; integrated it with a Node.js app to import and synchronize employee data.
- Built ReactJS frontends consuming .NET C# APIs, and a Node.js + MongoDB dashboard app for data visualizations sourced from a partner company.
- Deployed and maintained internal infrastructure — Nextcloud, replicated Linux VMs, reverse proxies, local DNS, WireGuard VPN, and GitLab with CI/CD runners — supporting the organization's internal services and development workflow.
- Managed Cloudflare for domain security and multi-subdomain deployments; implemented GitHub webhook auto-deployments.
- Mentored interns and conducted system audits for clients to identify improvement areas.

Mindoro State University

Calapan

Management Information System Officer

Jul 2019 – Sep 2020

- Developed a campus enrollment system using an MVC PHP framework, used to process student enrollments each term.
- Set up and maintained the computer laboratory and campus network infrastructure; resolved hardware, software, and network issues for staff and students.

Technical Skills

Backend

Expert

PHP, Laravel, Node.js, REST API, Microservices, TDD, WebSockets, DCAT Admin

DevOps and Infrastructure

Advanced

Docker, Devcontainer, Linux, CI/CD, GitHub Actions, GitLab CI, Nginx, Apache, Shell scripting, VMs

Databases

Advanced

MySQL, MongoDB, Redis, Memcached, RabbitMQ, Protobuf

Frontend

Intermediate

ReactJS, HTML, CSS, JavaScript, jQuery, Electron

Hardware and IoT

Intermediate

C++, Driver development, IoT, Microcontrollers, WebSocket servers

Integrations

Advanced

Xendit, UnionBank, Telegram Bot, Third-party game providers, Itexmo

Tools

Advanced

Git, GitHub, GitLab, Jira, Confluence, Cloudflare, WireGuard, Portainer, Nextcloud

Programming Languages

Advanced

PHP, JavaScript, Python, C++, C#, Bash
